Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claims 1-15 are pending and have been examined.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 02 April 2004 was considered by the examiner.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 8-12 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. System claims are software *per se*, not comprising hardware.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-15 are rejected under 35 U.S.C. 102(a) as being anticipated by **Logan** (US 6,601,018 B1).

Claim 1

Logan discloses in a system comprising a virtual machine manager process for managing operation of virtual machines, a method of performing unit tests on a specified plurality of the virtual machines (*column 2, lines 6-10; column 34-37*), the method comprising:

receiving instructions to configure a network of virtual machines comprising the specified plurality of virtual machines (*column 4, lines 1-2*);

based on the instructions to configure the network of virtual machines, configuring the network by launching the specified plurality of virtual machines (*column 4, lines 1-2, 15-18, 24-27*);

executing a test program to invoke execution of selected units of code of a target program on the specified plurality of the virtual machines (*column 4, lines 55-67*); and

verifying that actual results of the execution of selected units of code matches expected results (*column 7, lines 3-9*).

Claim 2

Logan discloses the method of claim 1 wherein the network of virtual machines is configured by creating at least one host computer object and a plurality of virtual machine objects associated with the at least one host computer object (*figure 1*).

Claim 3

Logan discloses the method of claim 1 wherein the virtual machine manager invokes the execution of selected units of code of the target program by issuing remote invocation method calls addressed to the specified plurality of virtual machines and specifying at least one unit of code of the targeted program to be executed by the specified plurality of virtual machines (*column 4, lines 43-44*,

50-51).

Claim 4

Logan discloses the method of claim 1 wherein the specified plurality of virtual machines are configured on a plurality of host computers (*figure 1*).

Claim 5

Logan discloses the method of claim 1 wherein the invocation of execution of selected units of code of the target program is asynchronous (*column 11, lines 30-33*).

Claim 6

Logan discloses the method of claim 1 further comprising, receiving an exception object indicative of an error in execution of at least one of the selected units of code of the targeted program (*column 8, lines 35-36*).

Claim 7

Logan discloses the method of claim 6 wherein the exception object further specifies at least one of the specified plurality of virtual machines on which the error in execution occurred (*column 7, lines 3-9 and column 11, lines 21-23*).

Claims 8-15

The limitations of claims 8-15 correspond to claims 1-7 and as such are rejected in a corresponding manner.
